# AC DC MOBILE EAM SOFTWARE "WHERE THE JIGSAW PIECES JUST FIT"

We built an EAM Mobile App on the fastest, most scalable technology available.

AC DC is a Mobile EAM solution that was built on the latest technology by EAM users who tried most all other prominent mobile solutions on the market today. GCS developers realized that mobile EAM should be a much better user experience. AC DC is a cloud based web application platform combining Application creation tools, BI analyst oversite and work management platforms. The AC DC Platform combines the ability to create applications that interact mobile as well as through native desktop browsers. This allows the ability to connect with virtually any EAM system through a built in REST API interface. The AC DC platform is a robust and flexible option for most any EAM situations.

AC DC was born out of a need for a large scale repeatable and accurate data collection process for asset capture and entry into EAM systems. The loss of data integrity using paper or even spreadsheets was unacceptable for our clients. We needed a quick concise mobile data collection system that would eliminate data errors and wasted effort. Sharing the data being captured in near real time with the field teams eliminated rework and increased data accuracy. The platform has proved itself so flexible that work management and inventory management applications have been built upon the same core platform.

AC DC mobile apps work on iOS, Android, & Windows devices.

KEY QUESTIONS ON THE AC DC PLATFORM

- **How is AC DC different than other EAM Mobile solutions** – Aside from the technical aspects being the latest technology, it's far more user-friendly and flexible. The platform has evolved from just mobile data capture and simple forms to complex mobile widgets having been developed and deployed on many of the applications not found on many of the current mobile EAM suites.
- **How is it offered…SaaS, perpetual licenses?** – Currently the offering is SaaS with MAC Address licensing so it's licensed per device. We also offer it as a Service.
- **Does AC DC have modules such as Inventory, Work Management, Asset collection?** – Yes, all the above including facility condition assessment and any other surveys that you can imagine.
- **How does it interface with Maximo and other EAM solutions?** – It has an API that can connect to an EAM's API utility. We have no need to connect to the EAM database everything is done via the front end.
- **How has it been used in the field so far?** – It's currently being used for EAM industries and applications including inventory for power generation as well as asset collection in the pharma and other major industries. Also various facilities management industries.

THE AC DC DIFFERENCE

It will immediately add to the flexibility of your workforce because now they can do their job anywhere anytime with no restrictions on being connected to the Internet or Wi-Fi network.

AC DC modules will run on iOS, Android, or Windows based devices with no problem.

The Apps are 100% configurable and customizable. How long it takes to complete depends on the complexity. Many screen or app modifications are adjusted in minutes.

The software apps are modular and you only pay for the functions that you use. It's very competitively priced. Please contact us for pricing information.
